Most of Celestron's GOTO mounts will work with an AC adapter that has these characteristics:

12VDC output
2.5 amps (2500 milliamps) current output
Inside tip positive
Inside diameter is 2.1mm
Outside diameter is 5.5mm
Jack length 10-15mm

Some smaller mounts might work with adapters with less amperage output. Our largest, newest mount , the CGE Pro, works best with adapters delivering 3.5 amps maximum or higher.
